

defaultUserForRole()

This function returns the **default project role** user for the current project. This user must be defined in a **JWT project property**.

If no default user has been defined for the project role, **another user** added to the project role will be returned. In the case that no user is added to the project role, an **empty string** will be returned.

Syntax

```
defaultUserForRole(projectRole) #Output: Text
```

Examples

Parser expression	Description
<pre>defaultUserForRole ("Developers")</pre>	<p>This example returns the default project role user for the Developers project role in the current project, e.g.: b.smith</p> <p>More info...</p> <p>This is how a project property could look like.</p> <div><p>Details</p><p>Name* SCRUM</p><p>Key* SCRUM ⓘ</p><p>URL</p><p>Project type* Software ⓘ</p><p>Project category None ⓘ</p><p>Avatar*  select image</p><p>Description {Developers=b.smith}</p></div> <p>If the user has not been added to the project role in advance, another user with the same project role or an empty string will be returned.</p>

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projectRole	<input type="text" value="TEXT"/>	Text containing a valid project role name.

Output

This function returns a

Variant where you can additionally define a specific **project key**.

Syntax

```
defaultUserForRole(projectRoleName, projectKey) #Output: Text
```

Examples

Parser expression	Description
-------------------	-------------

```
defaultUserForRole  
("Developers", "CRM")
```

This example returns the default **project role user** for the **Developers** project role in the **CRM** project, e.g.:

b.smith

More info...

This is how a project property could look like.
