

lastAssigneeInRole()

This function returns the **user name** of the last user who had the current issue assigned, and who is in a given **project role** within the current issue's project.

Null will be returned if the current issue was never assigned to a user in the project role.

Syntax

```
lastAssigneeInRole(projectRole) #Output: Text
```

Examples

Parser expression	Description
<pre>lastAssigneeInRole ("Developers")</pre>	This example returns the user from the project role Developers , who had last been assigned the issue, e.g. admin.istrator

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projectRole	<input type="text" value="TEXT"/>	Text containing a valid project role name. Multiple project roles can be specified in a comma-separated list of project role names.

Output

This function returns a

Variant where you can additionally define a specific **issue key**.

Syntax

```
lastAssigneeInRole(projectRole, issueKey) #Output: Text
```

Examples

Parser expression	Description
-------------------	-------------

```
lastAssigneeInRole  
("Developers", "CRM-1")
```

This example returns the user among all users of the **Developers** project role who was the last assignee of the issue **CRM-1**, e.g.:

admin.istrator

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projectRole	<input type="text" value="TEXT"/>	Text containing a valid project role name. Multiple project roles can be specified in a comma-separated list of project role names.
issueKey	<input type="text" value="TEXT"/>	Text containing a valid issue key.

Output

This function returns a

This function is useful if you want to **automatically assign** issues to the last user who was actively working on an issue e.g. before the issue was re-assigned for testing:

- [Assign issue action](#)
- [Update or copy field values](#)
