nextUserInGroup()

This function returns the name of the **next active user** in a given **group,** for a given **round-robin** queue.

The **queue name** is an arbitrary name. The queue is automatically created the first time a queue is used in the function. Each time the function is called on the same pair of arguments **(group, queue)**, a different user in the group is returned.

The queue can be used in different transitions of the same or different workflows within the same Jira instance.

Null is returned if the **group** is empty.

Syntax
nextUserInGroup(group, queue) #Output: Text

Examples

Parser expression	Description
nextUserInGroup("jira-developers", "code-review-queue")	This example returns the user name of the next user in **group jira-developers** for the round-robin queue **code-review-queue**. Each time the function is called with the same pair of arguments, a different user name is returned.

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
