

# Update assignee and reporter to facilitate user deletion

## On this page

[Manual trigger](#) | [JQL Selector](#) | [Update field action](#) | [Add comment action](#) | [JQL Selector](#) | [Assign issue action](#) | [Add comment action](#) | [Screencast](#) | [Import the example](#) | [Related use cases](#)

## Use case

From time to time employees leave a company. What happens to the respective Jira account? Deactivating could be an option but for data security reasons users might have to be deleted.

To avoid issues when deleting the user from the internal directory, the following rule can come in handy. It **replaces** all affected **assignees** and **reporters**. Otherwise user cannot be deleted! Plus: Issue related users will be informed by a comment!

## Manual trigger

1

Create a new rule and name it appropriately.

Providing a description will help you to identify what the rule does but this step is **optional**.

2

Add a **Trigger** **Manual**

No further configuration needed. The rule will only be executed if a user hits the Execute button .

We want to update both the **assignee** and the **reporter** but the issues might **not be identical**. This is why we have to set up two selectors and dedicated action.

## Update the reporter

## JQL Selector

1

Add **Selector** **JQL Selector**

2

**JQL Query**

Use the following **Expression**:

```
reporter = john.doe
```

Replace "john.doe" with the **user name** of the user that should be deleted.

## Update field action

Next to the **JQL Selector** click on **Add Action Update field**

1

### Field

Choose **Reporter**

2

### Update to

Choose **Selected value**

3

### Value

Select the new reporter that should be set.

## Add comment action

3

Underneath the **Update field Action** click on **Add Action Add comment**

4

### Comment text

```
For liability reasons the reporter has been automatically changed.
```

## Update the assignee

## JQL Selector

1

Underneath the **first JQL Selector** click on **Add Selector JQL Selector**

2

### JQL Query

Use the following **Expression**:

```
assignee = john.doe
```

Replace "john.doe" with the **user name** of the user that should be deleted.

### Assign issue action

3

Next to the **second JQL Selector** click on **Add Action Assign issue**

4

### Assignee

Choose one of the given options that fit most for you.

### Add comment action

5

Underneath the **Assign issue action** click on **Add Action Add comment**

6

### Comment text

```
For liability reasons the assignee has been automatically changed.
```

### Screencast

This is how the configuration above should look on your screen

Your browser does not support the HTML5 video element

### Import the example

**Import** the **JSON** file below to get started in no time.

JSON

After importing the JSON file, make sure to **check the configuration** of the rule. Non-existing configuration elements (issue types, fields, values etc.) will be highlighted.
