

Rule statuses

A rule's status refers to the **state** or **condition** of a rule.

The status has an impact on the available **actions** for a rule. It also helps you see if any **configuration errors** have been detected.

You can check the status of a rule in two different locations.

The rule navigator

In your **rule navigator interface**, you can see all of the rules you added and their corresponding statuses.

Automation Rules

Add rule

Name

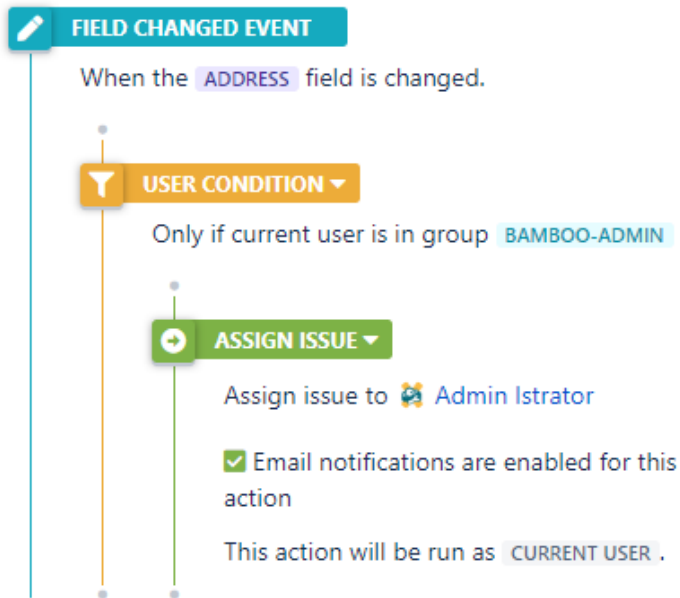

Status: AllTrigger: AllEvent: AllCreator: AllX

Status	Name	Trigger	Event	Creator	Created	Last modified	Actions
