Issue component selector

The **Issue component selector** is only available when a component-related [project event](#) trigger was configured.

The selector will return **all issues containing the specified components**.

 Issue component selector configuration

Below you will find a detailed description of each parameter needed to configure the condition.

Run as*

Select the user that will be used to execute the action. It can be chosen from one of the following options:

- **Current user** - the user who triggered the rule.
- **Selected user** - pick a dedicated user.

Only issues that this user is **able** to **view** (e.g via permissions, security levels) will be selected.

 Use Cases

Use case	Automated action	Use case description	Complexity
Notify assignees when components are merged	**Add comment**	Add a **comment to an issue** as soon as one of the selected component has been **merged**.	BEGINNER
