

Assign an issue to the last assignee on a transition

On this page

[Issue transitioned event](#) | [Boolean condition](#) | [Assign issue action](#) | [Screencast](#) | [Related use cases](#)

Use case

When an issue is transitioned to the **DRAFT** status, the issue will be automatically **re-assigned** to the **last assignee** from the **project role "Developers"**.

Should I use an automation rule or a workflow post function?

When to use this automation rule and when to use a workflow post function?

This use case is very useful if you need to re-assign issues across different projects and issue types.

If you only need to re-assign issues in one dedicated project or issue type context, using the [Assign to Project Role](#) workflow post function might be the better alternative.

Issue transitioned event

1

Create a new rule and name it appropriately.

Providing a description will help you to identify what the rule does but this step is **optional**.

2

Add a **Trigger** **Issue transitioned event**

Boolean condition

3

Add **Boolean condition** and enter the following **Parser Expression***

```
%{trigger.issue.status} = "Draft"
```

Boolean expressions are **logical constructions** that return **true** or **false**.

In this use case, the expression will only return true if the status of the **issue triggering the rule** is

DRAFT

Assign issue action

4

Add Action Assign issue

1

Assignee*

Choose **User in Project Role**

2

Project role

Choose **Developers**

3

User selection mode

Choose **Last assignee in selected project role**

5

Enable the rule by clicking on the **Enable button** ☐ ☒

Screencast

This is how the configuration above should look on your screen

Your browser does not support the HTML5 video element
