

# Notify assignees when components are merged

On this page

[Project event](#) | [Issue Component Selector](#) | [Add comment action](#) | [Screenshot](#) | [Related use cases](#)

## Use case

When a component is **deleted** in Jira you can "merge" it with an existing component. By default, you will not notice such a change. This is why the following automation rule will take care of these merges.

As soon as a **component from the current issue has been merged**, the **assignee will be notified about this change in a new comment**.

## Project event

1

Create a **new rule** and name it appropriately.

Providing a description will help you to identify what the rule does but this step is **optional**.

2

Add a **Trigger Project Event Component merged**

In this case, the **Component merged** event will be used. When no project is specified, the trigger will listen on every project for component merges.

## Issue Component Selector

3

Add **Selector Issue Component Selector**

## Add comment action

4

Next to the **Issue Component Selector** click on **Add Action Add Comment**

1

2

**Comment's text\***

```
Hi [~{%selector.issue.assignee}],  
  
the component {%trigger.component.name}* has been merged. You may want to  
take a look at this merge.  
  
Cheers!
```

"[-" is the notation for mentioning users by their username.

"\*" is the notation for making text bold.

5

Enable the rule by clicking on the **Enable button**

## Screencast

Your browser does not support the HTML5 video element
