

Resolve issues when all options of a checklist are checked

On this page

[Field changed event](#) | [Boolean condition](#) | [Transition issue action](#) | [Screenshot](#) | [Related use cases](#)

Use case

Sometimes resolving issues depends on fields set to a specific value. In this case, the issue is **automatically resolved and transitioned** to "**Done**" when all options of the **checkbox** custom field are ticked.

Field changed event

1

Create a new rule and name it appropriately.

Providing a description will help you to identify what the rule does but this step is optional.

2

Add a Trigger **Field changed event**

1

Field*

Choose your **checkbox custom field**

2

Changed to*

Choose **Any value**

No further configuration needed. The automation rule is triggered every time an issue is being transitioned.

Boolean condition

3

Add **Condition** **Boolean condition**

4

Use the following **Parser Expression***:

```
numberOfSelectedItems(%{trigger.issue.cf11500}) = numberOfAvailableItems(%{trigger.issue.cf11500})
#Replace field code with the field code of your custom field. Use the field dropdown to automatically insert the field code
```

- **cf11500** is the **field code** for the custom **checkbox field**. The field code will differ in your instance.
- **numberOfSelectedItems()** and **numberOfAvailableItems()** are functions that can be used with any **selectable field**.

Transition issue action

5

Add Action **Transition issue**

6

Mode*

Choose **Transition to status** **Done**

The target status has to be reachable from the current status, otherwise, the action **will not be executed**.

7

Enable the rule by clicking on the **Enable button** ☐ ☒

Screencast

This is how the configuration above should look on your screen

Your browser does not support the HTML5 video element
