projectProperty()

This function returns the value of a project property for a given project property in the current issue's project.

`Null` is returned if project property doesn't exist.

Syntax
`projectProperty(propertyName) #Output: Text`

Examples

Parser expression	Description
`projectProperty ("maxNumberOfReopenings")`	This example might return "**3**", if there is a property of: **{maxNumberOfReopenings=3}** in the description of current's issue project.

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`propertyName`	TEXT	Text containing a valid project property. Learn more about JWT project properties.

Output

This function returns a TEXT

Variant where you can additionally define a **project key**.

Syntax
`projectProperty(propertyName, projectKey) #Output: Text`

Examples

Parser expression	Description

`projectProperty ("maxNumberOfReopenings", "CRM")`	This example might return "**3**", if there is a property of: **{maxNumberOfReopenings=3}** in the description of the project with the key **CRM**.

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`propertyName`	TEXT	Text containing a valid project property. Learn more about JWT project properties.
`projectKey`	TEXT	Text containing a valid project key.

Output

This function returns a TEXT

Use cases and examples

Use case	JWT feature	Workflow function	Field type	Automated action	Parser functions
Set custom IDs for each issue		Set or create JWT project property Update or copy field values			length() projectProperty() substring() toNumber() year()
Calculate custom sequence numbers		Update or copy field values Set or create JWT project property			toUpperCase() substring() length() projectProperty() toNumber()
Only user specified in project property is allowed to execute transition		Condition on JWT project property Validation of JWT project property			projectProperty()
Validation based on the value of a date type project property		Logical validator Logical condition			stringToDate() projectProperty()
