isAClone()

This function returns **true** only if current issue is a clone of another issue

An issue is a clone of another issue if it's being created by Jira "Clone" operation, or has issue links of type "clones".

Syntax
isAClone() #Output: Boolean

Examples

Parser expression	Description
isAClone()	This example returns `true` or `false`, depending on whether an issue is a clone, e.g.: **true**

Output

This function returns a `BOOLEAN`

This function is useful for bypassing validations in the **Create Issue transition** when the issue is being created by a clone operation.
