Notify assignees when components are merged

Project event | Issue Component Selector | Add comment action | Screencast | Related use cases

Use case

When a component is **deleted** in Jira you can "merge" it with an existing component. By default, you will not notice such a change. This is why the following automation rule will take care of these merges.

As soon as a component from the current issue has been merged, the assignee will be notified about this change in a new comment.

Project event

Create a new rule and name it appropriately.

Providing a description will help you to identify what the rule does but this step is optional.

Add a Trigger Project Event Component merged

In this case, the **Component merged** event will be used. When no project is specified, the trigger will listen on every project for component merges.

Issue Component Selector

Add Selector Issue Component Selector

Add comment action

Comment's text*

Hi [~%{selector.issue.assignee}],

the component *%{trigger.component.name}* has been merged. You may want to take a look at this merge.

Cheers!

"[~" is the notation for mentioning users by their username.

"*" is the notation for making text bold.

Enable the rule by clicking on the **Enable button**

Screencast

Your browser does not support the HTML5 video element

Related use cases

Title	Automated action	Use case description	Complexity
Notify assignees when components are merged	Add comment	Add a comment to an issue as soon as one of the selected component has been merged .	BEGINNER
