

# getNumberList()

This function returns the values stored in a **number list variable**, which was previously created using the [setNumberList\(\)](#) function.

### Syntax

getNumberList(variableName) #Output: Number list

### Examples

| Expression parser                        | Description                                                                                                  |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <div>getNumberList("myNumberList")</div> | This example returns the values stored in the variable named <b>"myNumberList"</b> , e.g.:<br><b>[1,2,3]</b> |

### Additional information

Parameters used in this function

| Parameter    | Input (data type) | Description                      |
|--------------|-------------------|----------------------------------|
| variableName | <div>TEXT</div>   | The name of the stored variable. |

### Output

This function returns a 

NUMBER LIST

To return the value you **must have created** the **variable** before, using the [setNumberList\(\)](#) function **within the same expression**.
