

getIssueList()

This function returns the values stored in an **issue list variable**, which was previously created using the [setIssueList\(\)](#) function.

Syntax

```
getIssueList(variableName) #Output: Issue list
```

Examples

Expression parser	Description
<pre>getIssueList("myIssueList")</pre>	This example returns the values stored in the variable named " myIssueList ", e.g.: ["KEY-1", "KEY-2"]

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
variableName	TEXT	The name of the stored variable.

Output

This function returns an ISSUE LIST

To return the value you **must have created** the **variable** before, using the [setIssueList\(\)](#) function **within the same expression**.
