

second()

This function returns the **second** part of a timestamp based on a given **time zone**.

Syntax

```
second(timestamp, timeZone) #Output: Number
```

Examples

Parser expression	Description
<pre>second({issue.created}, LOCAL)</pre>	<p>This example returns: 30</p> <p>If the issue was created on March 25th, 2020 23:15:30 the output would be 30, for 30 seconds.</p>

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
timestamp	NUMBER	The parameter must be valid timestamp . Usually this value is retrieved from a field (e.g. due date, created date).
timeZone	TIMEZONE	The time zone used for the calculation.

Work days might depend on the **time zone** - it might be Sunday on the west coast of the US while at the same time it's already Monday in Australia.

Output

This function returns a NUMBER
