

JWT Release Notes 2.9.1

[Direct download from Marketplace](#)

Improvements

- Extended support for Botron's **Configuration Manager**, now including **versions**, **components** and **custom field options**
- The **child level of cascading selects fields** is now validated as required only when there are child options available
- Added warning in case of configuring **self-referencing expressions** in calculated custom fields
- Minor UI updates

Bug fixes

- The selected transition could be cleared unintentionally when editing a **Transition issues** post function
- **Parent fields** were not available in the **Field Changed Event** trigger
