Date and time of last status change

Field code
`%{issue.lastStatusChange}`

Read

Returned value	**Date and time** of the most **recent status change** of the issue
Output data type	TEXT
Example output	19/Mar/14 1:38 PM

When cast to text, the output depends on the **`jira.date.time.picker.java.format`** parameter set in your Jira instance.

19/Mar/20 1:38 PM would be returned for **`dd/MMM/yy h:mm a`**

Want to find out **how long** an issue has been **in the current status**? Try the function timeInStatus()

If you want to return a **number** (a timestamp) instead, **remove** the leading **%** character in front of the field code.

You will **not** be able to do this in the **basic mode**. Learn more about Parsing modes.
