

Temporary number

Field code

{issue.temporaryNumber1} ... {issue.temporaryNumber5}

Read

Returned value	Number previously stored in the temporary field
Output data type	<div>NUMBER</div>
Example output	10

Write

Valid text input	A text containing base 10 representation of a number
Valid numerical input	Integers, real numbers and also any date-time fields
Example input	10

There are **5 temporary number fields**.

- {issue.temporaryNumber1}
- {issue.temporaryNumber2}
- {issue.temporaryNumber3}
- {issue.temporaryNumber4}
- {issue.temporaryNumber5}

These fields are used to **hold temporary numeric and date-time values** returned by a **post function**, which can be used in a **subsequent post function** within the same workflow transition.

Conditions using temporary number fields:

- [JQL condition](#) - store the number of issues returned by the JQL in the field temporary number 1.

Please note that:

- once a **transition** execution has **ended**, all temporary fields are **cleared**.
- you **cannot** use temporary fields to pass values from **one transition to another**.
