New watchers

Field code
`No field code`

Write

Additional information for writing values	**Adds** new **watchers** to the issue
Valid text input	Comma-separated **list of usernames**, **group names** or **project roles names**
Valid numerical input	
Example input	username1, username2, username3

This field can also be used to add new watchers to **linked issues**, **sub-tasks** or issues returned by **JQL** easily.

Alternatively you can use the Watchers field with the additional + prefix.

The main use case for this virtual field is to add a watcher through the Update or copy field values post function or the Update field action without replacing or removing an existing one.

To learn more about this writable field, check out the adds an assignee as a watcher to every blocking issue use case.
