

# User directory ID

## Field code

```
%{trigger.user.directoryId}
```

Read

Returned value	ID of the <b>user directory</b> of the user triggering the event
Output data type	<input type="text" value="TEXT"/>
Example output	10001

This field code is **only available** for [JWT automation rules](#) since several events can trigger the execution of a rule.

**Automation-only** field codes can additionally retrieve information from the trigger event (e.g. the version being updated, the user triggering the event, etc.)
