

# Project URL (trigger)

## Field code

```
%{trigger.project.url}
```

Read

Returned value	URL of the project triggering the event
Output data type	<input type="text" value="TEXT"/>
Example output	<a href="https://www.decadis.de/x">https://www.decadis.de/x</a>

This field code is **only available** for [JWT automation rules](#) since several events can trigger the execution of a rule.

**Automation-only** field codes can additionally retrieve information from the trigger event (e.g. the version being updated, the user triggering the event, etc.)
