

# Project name (trigger)

## Field code

```
%{trigger.project.name}
```

Read

Returned value	Name of the <b>project</b> triggering the event
Output data type	<input type="text" value="TEXT"/>
Example output	Customer Relationship Management

This field code is **only available** for [JWT automation rules](#) since several events can trigger the execution of a rule.

**Automation-only** field codes can additionally retrieve information from the trigger event (e.g. the version being updated, the user triggering the event, etc.)
