

Only users in a field

This condition **enables only users** or **groups** stored in a **field** to execute the transition.

Configuration

Field

Select the field containing the users, either individual users or entire groups.

Text fields should contain a **single user**, **group name**, or a **comma-separated list** of user names or group names.

Do not confuse the **user name** with the **user's full name**.

This condition is the counterpart of the [Except users in a field](#) condition, which ensures that specific users stored in a field can **not** execute a transition.

Use cases and examples

Use case	JWT feature	Workflow function	Parser functions	Label
Only watchers can execute a transition		Only users in a field
