# User is not in project role

This condition ensures that the current **user** is **not** a member of a given **project role**.

This condition is the counterpart of the built-in condition **User Is In Project Role**.

## ⚙️ Configuration

### Project role

Select the project role that the **current user** must **not be a member of**.

If you want to dynamically define users and their group membership make sure to have a look at Users are/aren't in project role (condition).

## 📁 Use cases and examples

| Use case | JWT feature | Workflow function | Parser functions | Label |
|---|---|---|---|---|
| A developer must not execute the transition | 🔓 | User is not in project role | | |
