

# Date and time of resolution

## Field code

```
%{issue.resolutionDate}
```

Read

|                  |   |
|------------------|---|
| Returned value   | Date and time of the most <b>recent update</b> of the <b>issue's resolution</b> |
| Output data type | <input type="text" value="TEXT"/>   |
| Example output   | 19/Mar/20 1:38 PM   |

When cast to text, the output depends on the `jira.date.time.picker.java.format` parameter set in your Jira instance.

**19/Mar/20 1:38 PM** would be returned for `dd/MMM/yy h:mm a`

If you want to return a **number** (a timestamp) instead, **remove** the leading % character in front of the field code.

You will **not** be able to do this in the **basic mode**. Learn more about [Parsing modes](#).
