

# Project category (trigger)

| Field code                               |
|------------------------------------------|
| <code>%{trigger.project.category}</code> |

Read

|                  |                                                                 |
|------------------|-----------------------------------------------------------------|
| Returned value   | Name of the <b>category</b> of the project triggering the event |
| Output data type | <div>TEXT</div>                                                 |
| Example output   | Archive                                                         |

This field code is **only available** for [JWT automation rules](#) since several events can trigger the execution of a rule.

**Automation-only** field codes can additionally retrieve information from the trigger event (e.g. the version being updated, the user triggering the event, etc.)
