Project name (trigger)

Field code
`%{trigger.project.name}`

Read

Returned value	**Name** of the **project** triggering the event
Output data type	TEXT
Example output	Customer Relationship Management

This field code is **only available** for JWT automation rules since several events can trigger the execution of a rule.

Automation-only field codes can additionally retrieve information from the trigger event (e.g. the version being updated, the user triggering the event, etc.)
