# Number of unresolved blocking issues

### Use case

This calculated field returns the **number** of all issues **linked** to the **current issue** as **blockers**. Additionally only those issue will be taken into account which are still **unresolved**.

## Configuration

1

Create a new Calculated Number Field (by JWT) custom field and name it properly.

Providing a description will help you to identify what the custom field does but this step is optional.

#### Parser expression

Add the following expression:

Math expression for Calculated number field:

count(filterByResolution(linkedIssues("is blocked by"), ""))

### more info...

To achieve this, the following functions are used:

count()

- filterByResolution()
- linkedIssues()

Add the field to the relevant view screens.

Remember: All calculated fields are read-only and cannot be manually updated on a create or edit screen.

#### Check the results

Once configured and added to an issue screen, the result will look like this:

2 C II	ault configuration schei	me generated by Jira
