

Total remaining estimate in an epic (all linked issues)

Use case

This use case calculates the **total of all remaining estimates** (in days) of issues and sub-tasks linked to the current epic.

If you want to **exclude sub-tasks** have a look at the following use case: [Total remaining estimate in an epic \(no sub-tasks\)](#).

Configuration

1

Create a new **Calculated Number Field (by JWT)** custom field and name it properly.

Providing a description will help you to identify what the custom field does but this step is **optional**

2

Parser expression

Add the following expression:

Math expression for Calculated Number field:

```
sum(fieldValue({issue.remainingEstimate}, issuesUnderEpic() UNION subtasks
(issuesUnderEpic())) / 480
# The result, which returns the number of minutes is divided by 480 to return a number of
working days.
```

more info...

To achieve this, the following functions are used:

- `sum()`
- `fieldValue()`
- `issuesUnderEpic()`
- `UNION`
- `subtasks()`

3

Display format

1

Content type

Choose **Number**

2

Number format pattern

Choose

###.##d

4

Check the results

Once configured and added to an issue screen (e.g. an epic), the result will look like this:
