projectsWhereNumberProperty()

This JQL function returns projects with specific properties containing a **numeric** value.

Syntax

```
projectsWhereNumberProperty(propertyName, operator, number) #Output: Text list
```

Examples

Parser expression	Description
`project in projectsWhereNumberProperty ("maximumNumberOfTryOuts", ">", 3)`	This example returns a list of projects where the property called **maximumNumberOfTryOuts** i s **bigger than 3,** e.g. text **`{maximumNumberOfTryOuts=5}`** is present in the project's description.
`project in projectsWhereNumberProperty ("numberOfLevels", "=", 5)`	This example returns a list of projects where the property called **numberOfLevels** is **equal to 5,** e.g. text **`{numberOfLevels=5}`** is present in the project's description.

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`propertyName`	TEXT	The name of a project property containing a numeric value.
`operator`	TEXT	A valid comparison operator.
`number`	NUMBER	The number to be compared with the value stored in the project property.

Output

This function returns a TEXT LIST.

The result is **not what you expected**? The number of returned issues feels **too low**?

By default, the **maximum number** of issues that will be returned by the JQL subquery, and thus can be processed by the logical expression is **1 000**.

To ensure the performance of your entire Jira instance, we limit the execution of the JQL function in terms of **issue count** and **execution time**. Please refer to your admin if you need to change the configuration.
