Service Management Queues

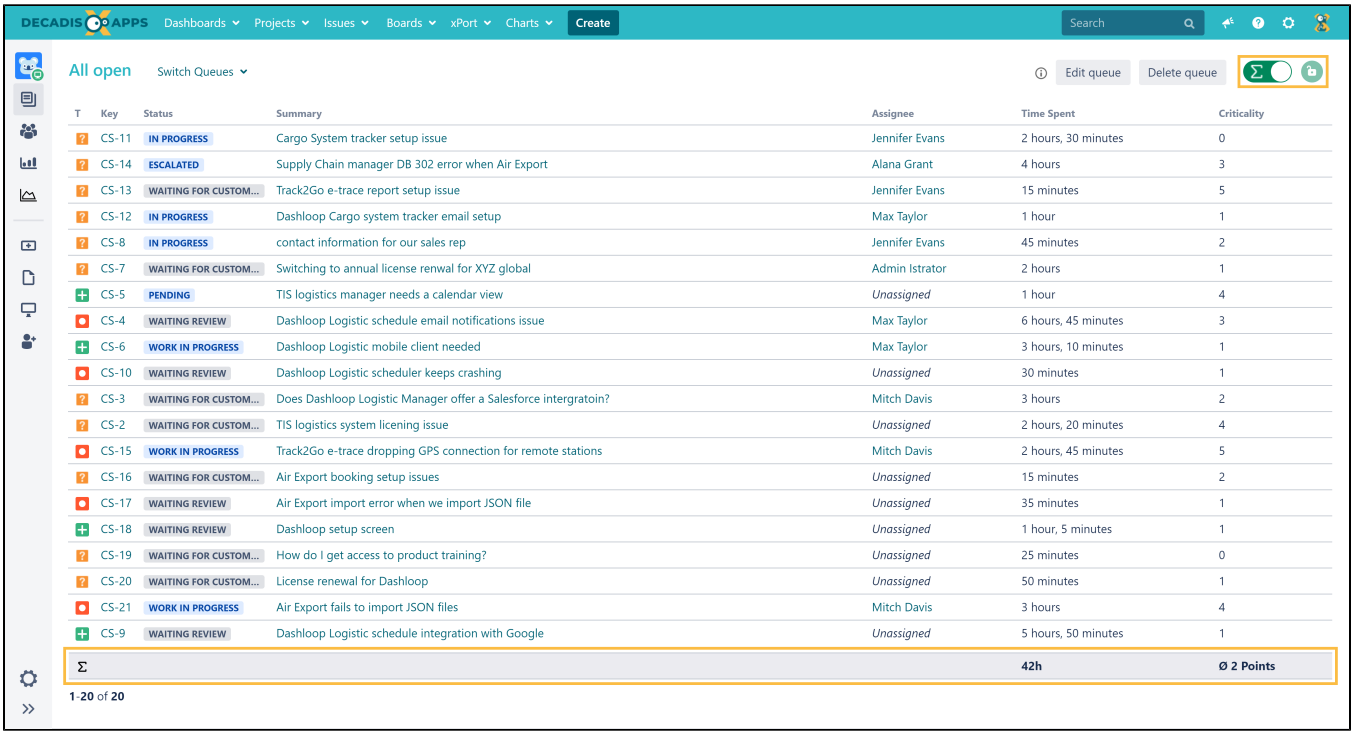

On this page

Enable/ disable the calculation row | Permanent calculation

SINCE VERSION 3.5.0

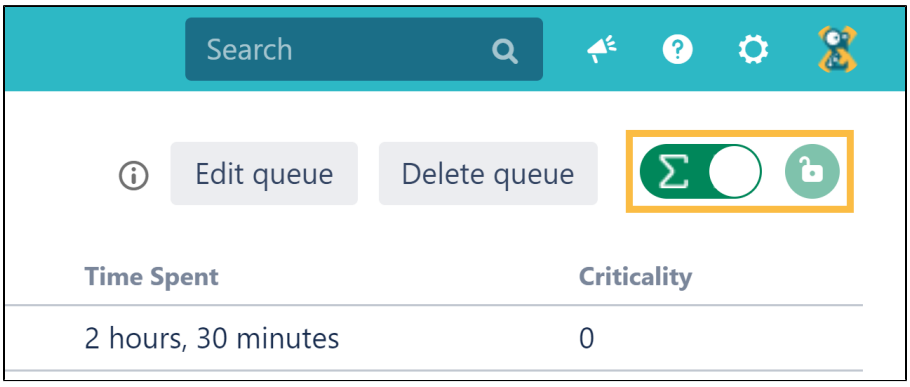

Since **sumUp 3.5.0** it is possible to enable a **calculation row** within **Service Management Queues**.

If no calculation rules are configured, the calculation row won't be displayed.

Enable/ disable the calculation row

The calculation row can be activated by clicking the **toggle button** in the **upper right corner**:

If **sumUp is not configured** or activated for the queue, the **buttons won't be displayed!**

In this case, please check that sumUp is activated for the service project of interest within **sumUp's global settings**.

Permanent calculation

If the **permanent calculation is not activated**, the **calculation** will be **disabled** every time the page/ queue reloads.

To **keep the calculation activated** after page/queue reloads, the **permanent calculation** can be activated by hitting the lock button next to the toggle button in the upper right corner.
