

sumUp custom fields

On this page

[Features](#) | [Create a new sumUp Custom field](#) | [sumUp Custom fields within Confluence](#)

Features

Our **sumUp custom fields** help you keeping track of your most important information in projects and issues. They can be added to the **issue navigator** or directly to your **issue screens**.

They can be used for:

- **Summation and average calculation** based on a **JQL Query**
- Visualization of **progress** based on a **JQL Query**

Create a new sumUp Custom field

To create a new sumUp Custom Field go to **Jira Administration** **Issues** **Custom fields** **Add custom field**.

Click on **"All"** and select one of the sumUp field types shown below.

Select a Field Type

sumUp

All

Standard

Advanced

CALCULATED FIELD

Calculated Field (by sumUp)

Displays the sum or average value from issues selected by JQL query.

CALCULATED PROGRESS FIELD

Calculated Progress Field (by sumUp)

Displays a customizable progress from issues selected by JQL query.

Take a look on how the custom fields get set up:

- sumUp calculated field
- sumUp progress field
- Use cases

sumUp Custom fields within Confluence

SINCE VERSION 3.2.2

Please notice:

Pre-requisite for this feature is an established **application link** between a Jira and Confluence instance. For more information please consult the [official Atlassian documentation](#).

Since version 3.2.2 it is possible to display **sumUp custom fields** in the Confluence Jira filter macro.
