

Move an issue to another project

On this page

[Configuration](#) | [Screenshots](#) | [Related examples](#)

Use case

In the following use case we are going to move the current issue to another project.

Make sure this post function is the last one on your post functions list.

Configuration

1

Add the [Move issue](#) post function to the desired workflow transition.

2

Project

Choose **Selected project** and select one project from the drop down list.

3

Issue type

Choose **Retain the issue type**

4

Status

Choose **Retain the status**.

5

Fields

Select two fields to add:

1

- Choose the field **Summary**
- Set the **Value** to **Set field value manually (parser expression)**
- **Expression**, set it to **basic text**

```
%{issue.summary} - Moved from %{issue.project.name}
```

2

- Choose the field **New comment**
- Set the **Value** to **Set field value manually (parser expression)**
- **Expression**, set it to **basic text**

This issue has been moved from `%{issue.project.name}` to the current project. The issue key was `%{issue.key}`.
