

Push status updates to the parent

On this page

[Configuration steps](#) | [Target issue*](#) | [Comment text*](#) | [Comment author*](#) | [Comment visibility*](#) | [Related examples](#)

Use case

Add a comment to the **parent issue** including the **summary** and **status** of the current issue.

This is helpful when you don't want to keep track of individual sub-tasks and only receive notifications of the parent issue (e.g. as a watcher or reporter).

Configuration steps

1

Target issue*

Select **Parent issue**.

2

Comment text*

Use the following expression:

```
The issue ${issue.key} has just been transitioned to ${issue.status}.
```

The comment includes the following information :

1. the **key** of the current issue which will be rendered with the added **summary** in the comment
2. the **current status** of the current issue

3

Comment author*

Select **Assignee**.

4

Comment visibility*

For this example we choose **unrestricted (all users)**.

All users with access to the issue will see the comment.
