

Create a sub-task for high priority issues

On this page

[Configuration steps](#) | [Mode*](#) | [Issue type*](#) | [Parent issue*](#) | [Summary*](#) | [Description](#) | [Run as*](#) | [Conditional execution](#) | [Related examples](#)

Use case

Create a **sub-task only** if the **priority** of the current issue is **"High"**.

Configuration steps

1

Mode*

Choose **Single issue**.

2

Issue type*

Choose **Selected issue type** and **Sub-task** as its value.

The issue type to be created is being set to **Sub-task**.

The issue type must be present in your system.

3

Parent issue*

Select **current issue**.

The **sub-task** will be created under the **current issue**.

4

Summary*

Insert the following expression:

```
Escalation of %{issue.key}
```

A generic **summary** indicating that the bug needs to be classified.

Description

5

Insert the following expression:

This sub-task was automatically created because the parent issue `%{issue.key}` had a priority of High at the time of creation.

In case doubts or concerns do not hesitate to contact `%{system.currentUser}`.

The description links to the **current issue key**.

The syntax used for the mention guarantees that a working user mention is added to the comment regardless of personal Atlassian account settings of the mentioned user.

6

Run as*

Choose which **user*** will be able to execute the post function. By default, it is set to the Current user.

7

Conditional execution

Insert the following expression:

```
%{issue.priority} = "High"
```

The sub-task will **only** be created if the current issue (parent) has a **priority** of "High".
