

# Set Fix version to Affects version when resolving an issue

On this page

[Configuration steps](#) | [Target issue\\*](#) | [Fields](#) | [Run as\\*](#) | [Conditional execution](#) | [Related examples](#)

## Use case

When an **issue is resolved** and the resolution set to **"Done"** the **Affects version/s** will be added to the **Fix version/s** field.

## Configuration steps

1

### Target issue\*

Select **Current issue**.

The **current issue** will be updated.

2

### Fields

1

Select **Fix version/s**

2

Set the **Value\*** to **Copy field value from current issue**.

3

Set **Fields** to **Affects version/s ID**.

Versions selected in the **Affects version/s** field will be copied to the **Fix version/s** field.

3

### Run as\*

Choose which **user\*** will be able to execute the post function. By default, it is set to the Current user.

4

### Conditional execution

Insert the following expression:

```
%{issue.resolution} = "Done"
```

The post function will **only be executed** when the **resolution** is set to **"Done"**
