Check for unresolved sub-tasks

On this page

Configuration | Variations | Related examples

Use case

Check whether the current issue has any unresolved sub-tasks.

This is particularly important if you want to **block a parent issue** as long as work is still being done on related sub-tasks.

This use case is valid for both conditions and validators. The only difference is that you can specify an additional **error message** when using a validator.

Configuration

Jira expression*

issue.subtasks.filter(s \Rightarrow !(s.resolution != null)).length == 0

This expression makes sure that there are no sub-tasks of the current issue that don't have a resolution set.

 $\left(\mathsf{2} \right)$

Variations

You can easily modify this use case to check for specific resolutions or statuses.

Jira expression*

issue.subtasks.filter(s => !(s.resolution.name == "Done")).length == 0

This expression makes sure that there are **all sub-tasks** of the current issue that **have a resolution set to** "Done".

(2)

Jira expression*

issue.subtasks.filter(s => !(s.status.name == "Done")).length == 0

All sub-tasks must be in the status of DONE

3

Jira expression*

issue.parent.subtasks.filter(sub => sub.status.id != 10001).length == 0

This expression checks that all sibling sub-tasks are in status with id 10001.
