modulus(numbers)

This function returns the **remainder after division** of the dividend by the divisor.

Syntax

```
modulus(dividend, divisor) #Output: Number
```

The number divisor **cannot** be equal to **0**.

Examples

Parser expression	Description
`%{modulus(4,2)}`	This example returns: **0**
`%{modulus(3,2)}`	This example returns: **1**

Additional information
