

# toNumber()

This function converts a **text** representing a numerical value to a **number**.

This function expects a **decimal** representation of a number. In case it is not possible to parse the text to a number and **null** is returned.

## Syntax

```
toNumber(text) #Output: Number
```

## Examples

Parser expression	Description
<pre>%{toNumber("3.14")}</pre>	This example return: <b>3.14</b>

## Additional information
