

datePart()

This function returns the **date part** of any given timestamp.

Syntax

```
datePart(timestamp, timeZone) #Output: Number
```

Examples

Parser expression	Description
<pre>%{datePart({issue.created}, RUN_AS_LOCAL)}</pre>	<p>This example returns the issue's creation date, e.g. March 25th, 2020 00:00 as a number in milliseconds.</p> <p>i If the creation date was March 25th, 2020 23:15 the output would be March 25th, 2020 00:00 (in milliseconds).</p> <p>The time part 23:15 will be removed from the timestamp and will be set to 00:00.</p>

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
timestamp	NUMBER	The parameter must be valid timestamp . Usually this value is retrieved from a field (e.g. due date, created date).
timeZone	TEXT	The time zone used for the calculation.

Output

This function returns a **NUMBER** representing a timestamp.

If you need the **time** part instead you might want to have a look at the function [timePart\(\)](#).
