

# timePart()

This function returns the **time** part of any given timestamp.

## Syntax

```
timePart(timestamp, timeZone) #Output: Number
```

## Examples

Parser expression	Description
<pre>%{timePart({issue.created}, RUN_AS_LOCAL)}</pre>	<p>This example returns the time part of the issue <b>creation date timestamp</b> in milliseconds.</p> <p> If the creation date was <b>March 25th, 2020 23:15</b> the output would be <b>23:15</b> (in milliseconds).</p>

## Additional information

Parameters used in this function

Parameter	Input (data type)	Description
timestamp	NUMBER	The parameter must be a valid <b>timestamp</b> . Usually this value is retrieved from a <a href="#">field</a> (e.g. due date, created date).
timeZone	TEXT	The <b>time zone</b> used for the calculation.

## Output

This function returns a

NUMBER

If you need the **date** part instead you might want to have a look at the function [datePart\(\)](#).
