findReplaceFirst()

This function replaces the **first occurrence** of a given **text** with a given **replacement**.

Syntax
`findReplaceFirst(text, textToBeReplaced, replacement) #Output: Text`

Examples

Parser expression	Description
`%{findReplaceFirst("Goodbye my love, hello my friend.", "my", "your")}`	This example returns: **Goodbye your love, hello my friend.**

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`text`	TEXT	Any given text.
`textToBeReplaced`	TEXT	The string that should be replaced.
`replacement`	TEXT	The replacement for the first found substring matching the **`textToBeReplaced`**.

Output

This function returns a TEXT

If you want to use a regular expression instead, have a look at replaceFirst().

If you want to replace **all** occurences of a substring, have a look at findReplaceAll().
