

# Field codes

## On this page

[Field code notation](#) | [Available JWT field codes](#) | [All available field codes in one place!](#)

One of the main features of **JWT for Jira Cloud** is the easy access to Jira data through the use of field codes.

Depending on the **selected Parsing mode**, the available field codes will vary. Custom fields are shown if they are defined for a global context or if the "Jira Workflow Toolbox Cloud" user has browse permissions for the respective project.

**JWT field codes** are currently available to be used in [post functions](#) with the following **Parsing modes**:

- [General mode](#)
- [Logical mode](#)

**Jira expressions** use the [Jira expression parsing mode](#) and a different set of field codes. They can be used in post functions as well as in the [Jira expression condition/validator](#).

If you want to include Jira expression field codes in the [General mode](#) or the [Logical mode](#), simply use the JWT expression parser function `jiraExpression()`, e.g. `%{ jiraExpression(issue?.sprint?.endDate) }` to get the end date of the sprint (this field is not available as JWT field code).

## General information about JWT field codes

### Field code notation

Depending on the **context** in which they are being used, field codes will contain a **prefix** following this **notation**: `{origin.field}`

Available **contexts** (or `origins`) in JWT for Jira Cloud are:

Context	Description
<code>issue</code>	The <b>issue</b> that is processed by the workflow post function
<code>parent</code>	The <b>parent</b> of the <b>issue</b> that is processed by the workflow post function - <b>if available</b>
<code>seed</code>	The field <b>value</b> will be retrieved from the <b>element</b> currently being <b>processed by</b> a workflow function capable of handling multiple elements (e.g. <a href="#">Create issue</a> post function).  Elements can be: <ul style="list-style-type: none"><li>• <b>texts</b></li><li>• <b>numbers</b></li><li>• <b>issues</b></li></ul> depending on your configuration. Read more about <a href="#">seeds</a> .
<code>system</code>	Some data does <b>not have an issue context</b> (e.g. the <b>currently logged in user</b> or the <b>system date and time</b> )
<code>action</code>	This field code context is only available in the post function <a href="#">Execute remote action</a> . It is used to access data which is returned by the executed action.

The **prefix**, denoting the **origin** (where the data should be **read from / written to**), is a referential part of the field code and **will be inserted into the expression** whenever you select a field from a drop-down list.

Here are some examples:

Field code	Output
<code>%{issue. description}</code>	The <b>description</b> of the <b>current issue</b>
<code>%{parent.summary}</code>	The <b>summary</b> of the <b>parent issue</b>
<code>%{issue.project.lead}</code>	The <b>project lead</b> of the project the issue belong to
<code>%{seed.issue.summary}</code>	The <b>summary</b> of the current element of the issue list when using the mode "Multiple issues based on an issue list"
<code>%{seed.text }</code>	The <b>text</b> of the current element of the text list when using the mode "Multiple issues based on a text list"
<code>%{seed.number }</code>	The value of the current <b>number</b> when using the mode "Multiple issues based on a number"
<code>%{system.currentUser}</code>	The <b>current user</b> (executing the post function)
<code>%{action.status}</code>	The <b>status of the action</b> that was executed in the post function <a href="#">Execute remote action</a> .

## Numbers vs Text

Field codes must always be enclosed by **curly brackets**. If they are used for **texts**, the brackets must be preceded by a **percent sign %**.

- **Numeric fields** can be referenced as numbers using the following notation: `{issue. somenumberfield}` . ( ⓘ no preceding % sign)
  - If the field is not set or doesn't return a number (e.g. if the issue summary equals "Issue's summary" and you enter `{issue. summary}` ), it is evaluated to `null` .
- **Text fields**: Any field type or data type can be transformed to text, so **any field can be referenced as a text value** using the following notation: `%{issue.somefield}`
  - If a field has no value (`null` ), an empty text will be returned.
- **Cascading Select** fields are treated as text fields, where `i` is the index that represents the level to be accessed. ( `i = 0` is used for base level) are notated as `%{issue.somefield.i}`

For some fields not only their value can be returned, but also the respective **ID**. This ID is typically used when **writing** a field value, but it can also be used when reading a field value.

If a custom field is able to return an ID it can be accessed using the field code `%{somefield.id}` . The column **ID** in the lists below shows a value for the respective field, if applicable.

## Available JWT field codes

- Issue related fields can belong to an `issue` or it's `parent` . In case you want to retrieve the value of the parent issue, " `issue` " has to be replaced " `parent` " as in `%{parent.summary}` . In case, a field is not set (or even non-existent), this field is evaluated to `null` , i.e. an empty text.
- The field codes for all custom fields are notated in the following format: `%{issue.cfnnnn}` , where `nnnn` contains the Jira **custom field ID**.
- If **Jira Software** is installed on your Jira instance, you can retrieve the data stored in the Jira Software related field with **Jira Workflow Toolbox for Jira Cloud** as well. You can access those, like any other custom field in your instance, i.e. `%{issue.cfnnnn}` , where `nnnn` contains the Jira **custom field ID** .
- Writable fields can be updated by JWT for Jira Cloud [post functions](#) . All writable fields are also readable.
- The field codes for all custom fields are notated in the following format: `%{issue.cfnnnn}` , where `nnnn` contains the Jira **custom field ID**.

Please note that the field you want to set **must be located on the corresponding screen** and the executing user must have all the necessary **permissions** and **access** to the issue.

## General information about Jira expression field codes

All fields, methods and operators listed for the Jira expression field codes have been taken from the [official documentation](#) and cannot be extended by JWT for Jira Cloud.

In the list we use [optional chaining](#) to avoid errors when trying to access field values of null objects. In case a field is not set, **null** is returned for the respective attribute, e.g. `issue?.resolution?.name` will return **null** in case the resolution is not set. Without the optional chaining an error will be returned.

If a `.map()` function is used as field code (e.g. `issue?.links?.map(link => link.linkedIssue.key)` for [Keys of linked issues](#) ), then this map will return an error in case the issue does not have links. You have to ensure in your final expression that this error will be handled. This can be done by using the field code only when there are issue links, e.g. `issue.links != null && issue?.links?.map(link => link.linkedIssue.key)`.

**All custom fields are available** and can be referenced by one of the following:

- **ID:** `issue.customfield_10010` for default custom field types
- **key:** `issue['com.my.app.field-key']` for custom field types provided by 3rd party apps

Custom fields are returned as JSON values, using exactly the same format as in the issue REST API. You have to access the respective property, e.g. `issue.customfield_10010.value`.

Any field that is hidden in the active field configuration for the current issue will be returned as **null**, regardless of its actual value. Read more about hiding and showing fields in the documentation on the [Changing a field configuration](#) page.

## Jira software

If [Jira Software](#) is licensed for the current user, the following fields will also be available.

Epics (issues that have `issue.isEpic` equal to `true` or returned by `issue.epic`) have additional, epic-specific fields. These fields are `null` for regular issues.

Field name	JWT field code	Jira expression field code	Example input	Example output
Closed sprints		issue?.closedSprints?.map(s => s.name)		Start, MVP
Epic color	<code>%{issue.customfield_nnnnn}</code>	issue?.epic?.color		color_8
Epic done		issue?.epic?.done		true
Epic link	<code>%{issue.customfield_nnnnn}</code>	issue?.epic?.key	PRJ-2	PRJ-2
Epic name	<code>%{issue.customfield_nnnnn}</code>	issue?.epic?.name	This is my Epic's name	This is my Epic's name
Epic Status	<code>%{issue.customfield_nnnnn}</code>	issue?.epic?.status?.name		To Do
Flagged		issue?.flagged		true
is Epic		issue?.isEpic		true
Rank	<code>%{issue.customfield_nnnnn}</code>	issue?.customfield_nnnnn	0 0016n:	

Sprint	<code>%{issue.cfnnnnn}</code>	<code>issue?.customfield_nnnnn?.map(c =&gt; c.name).sort()</code>	2	First sprint
Sprint completeDate		<code>issue?.sprint?.completeDate</code>		2021-08-10T15:08:00.000Z
Sprint endDate		<code>issue?.sprint?.endDate</code>		2021-06-10T04:08:00.000-1100
Sprint goal		<code>issue?.sprint?.goal</code>		Finish MVP
Sprint ID	<code>{issue.cfnnnnn}</code>	<code>issue?.customfield_nnnnn?.map(c =&gt; c.id).sort()</code>	4	
Sprint startDate		<code>issue?.sprint?.startDate</code>		2021-05-27T04:08:00.000-1100
Sprint state		<code>issue?.sprint?.state</code>		active
Stories		<code>issue?.epic?.stories?.map(s =&gt; s.key)</code>		PU-3,PU-25,PU-7
Story point estimate	<code>%{issue.cfnnnnn}</code>	<code>issue?.customfield_nnnnn</code>	34	40

## Numbers

Field name	JWT field code	Jira expression field code	Example input	Example output
Number Field	<code>{issue.cfnnnnn}</code>	<code>issue?.customfield_nnnnn</code>	12.12	2.7181
Number of affects version /s	<code>{issue.versions.length}</code>	<code>issue?.versions?.length</code>		3
Number of attachments	<code>{issue.attachments.length}</code>	<code>issue?.attachments?.length</code>		3
Number of comments	<code>{issue.cfnnnnn}</code>	<code>issue?.customfield_nnnnn</code>		7
Number of fix version/s	<code>{issue.fixVersions.length}</code>	<code>issue?.fixVersions?.length</code>		5
Number of labels	<code>{issue.labels.length}</code>	<code>issue?.labels?.length</code>		4
Number of linked issues	<code>{issue.links.length}</code>	<code>issue?.links?.length</code>		3
Number of sub-tasks	<code>{issue.subtasks.length}</code>	<code>issue?.subtasks?.length</code>		3
Number of votes received	<code>%{issue.votes}</code>	<code>issue?.votes</code>		5

## Priority

Field name	JWT field code	Jira expression field code	Example input	Example output
Priority	<code>%{issue.priority}</code>	<code>issue?.priority?.name</code>		Critical
Priority description		<code>issue?.priority?.description</code>		This is the highest priority
Priority ID	<code>{issue.priority.id}</code>	<code>issue?.priority?.id</code>	10004	10010

## Project

Field name	JWT field code	Jira expression field code	Example input	Example output
Project	<code>%{issue.project}</code>	<code>issue?.project?.key</code>		HR
Project category	<code>%{issue.project.category}</code>	<code>issue?.project?.projectCategory?.name</code>		Development
Project description	<code>%{issue.project.description}</code>			Take your Jira to the next level by using JWT for Jira Cloud
Project ID	<code>{issue.project.id}</code>	<code>issue?.project?.id</code>	10200	10100
Project key	<code>%{issue.project.key}</code>	<code>issue?.project?.key</code>		HR
Project lead	<code>%{issue.project.lead}</code>			557068:145e0983-5707-439c-80e4-1160dd57g114
Project lead's email	<code>%{issue.project.leadEmail}</code>			user@example.com
Project lead's full name	<code>%{issue.project.leadDisplayName}</code>			Robert Smith
Project name	<code>%{issue.project.name}</code>	<code>issue?.project?.name</code>		Customer Relationship Management
Project Picker (single project)	<code>%{issue.cfnnnnn}</code>	<code>issue?.customfield_nnnnn?.key</code>	10045	PRJ
Project Picker (single project) - Name	<code>%{issue.cfnnnnn.name}</code>	<code>issue?.customfield_nnnnn?.name</code>		Development Project
Project style		<code>issue?.project?.style</code>		classic
Project type key		<code>issue?.project?.projectTypeKey</code>		software
Project URL	<code>%{issue.project.url}</code>			<a href="https://www.decadis.de/x">https://www.decadis.de/x</a>

## Resolution

Field name	JWT field code	Jira expression field code	Example input	Example output
Resolution	<code>%{issue.resolution}</code>	<code>issue?.resolution?.name</code>		Won't fix
Resolution date	<code>%{issue.resolutionDate}</code>	<code>issue?.resolutionDate</code>		2019-12-04T09:30:46.279+0100
Resolution description		<code>issue?.resolution?.description</code>		Work has been completed on this issue.
Resolution ID	<code>%{issue.resolution.id}</code>	<code>issue?.resolution?.id</code>	10200	10000

## Security

Field name	JWT field code	Jira expression field code	Example input	Example output
Security level	<code>%{issue.securityLevel}</code>	<code>issue?.securityLevel?.name</code>		Classified
Security level description		<code>issue?.securityLevel?.description</code>		only the reporter has access
Security level ID	<code>{issue.securityLevel.id}</code>	<code>issue?.securityLevel?.id</code>	10010	10001

## Status

Field name	JWT field code	Jira expression field code	Example input	Example output
Available target statuses	<code>%{issue.status.achievable}</code>			In Progress,Resolved,Closed
Available transitions	<code>%{issue.transitions.achievable}</code>			Start Progress,Resolve Issue, Close Issue
Issue status	<code>%{issue.status}</code>	<code>issue?.status?.name</code>		Open
Issue status category	<code>%{issue.status.category}</code>	<code>issue?.status?.category?.name</code>		Done
Issue status description		<code>issue?.status?.description</code>		This issue is considered Done
Issue status ID	<code>%{issue.status.id}</code>	<code>issue?.status?.id</code>	10100	
Previous issue status	<code>%{issue.status.previous}</code>			Closed
Status category color		<code>issue?.status?.category?.colorName</code>		grey-blue
Status category ID		<code>issue?.status?.category?.id</code>	4	
Status category key		<code>issue?.status?.category?.key</code>		New

## System

Field name	JWT field code	Jira expression field code	Example input	Example output
Current date and time	<code>%{system.currentTimeMillis}</code>	<code>new Date()</code>		2019-04-01T14:19:07.060+0200

Current user	<code>%{system.currentUser}</code>	user.accountId	777068:145e0983-5707-439c-80e4-1160dd57x554
Current user's email	<code>%{system.currentUser.email}</code>		user@example.com
Current user's full name	<code>%{system.currentUser.displayName}</code>	user.displayName	Bob Smith
JIRA base URL	<code>%{system.baseUrl}</code>		<a href="https://jwt-cloud.atlassian.net">https://jwt-cloud.atlassian.net</a>

## User

Field name	JWT field code	Jira expression field code	Example input	Example output
Assignee	<code>%{issue.assignee}</code>	<code>issue?.assignee?.accountId</code>	557068:145e0983-5707-439c-80e4-1160dd57g114	557068:145e0983-5707-439c-80e4-1160dd57g114
