

# JWT expression parser functions

Jira Workflow Toolbox for Jira Cloud uses a powerful expression parser for interpreting **logical**, **mathematical**, **date-time** and **text** functions.

The following is a list of the available expression parser functions:

- [Dates and times](#)
- [Numbers](#)
- [Texts](#)
- [Lists](#)
- [Converting data types](#)
- [Users](#)

## All available parser functions

Function name	Short description	Output
<a href="#">abs(number)</a>	Returns the <b>absolute</b> value of the input number.	NUMBER
<a href="#">addDays()</a>	<b>Adds</b> or <b>subtracts days</b> to or from <b>any given date</b> .	NUMBER
<a href="#">append()</a>	<b>Combines</b> the elements of two <b>lists</b> .	NUMBER LIST TEXT LIST ISSUE LIST
<a href="#">avg()</a>	Calculates the <b>average</b> values of a given number list.	NUMBER
<a href="#">ceil(number)</a>	Returns the <b>smallest mathematical integer</b> that is greater than or equal to the input number.	NUMBER
<a href="#">count()</a>	Returns the <b>number of elements</b> in a text, number or issue list.	NUMBER
<a href="#">datePart()</a>	Returns the <b>date part</b> of any given date.	NUMBER
<a href="#">dateTimeToString()</a>	Returns the timestamp of <b>any given date</b> in <b>text form</b> .	TEXT
<a href="#">dateToString()</a>	Converts <b>any given date</b> to a <b>text</b> .	TEXT
<a href="#">dayOfMonth()</a>	Returns the <b>day of the month</b> of <b>any given timestamp</b> .	NUMBER
<a href="#">dayOfWeek()</a>	Returns the <b>day of the week</b> of any given timestamp.	NUMBER
<a href="#">distinct()</a>	<b>Removes all duplicates</b> from a number, text, or issue list.	NUMBER LIST TEXT LIST ISSUE LIST
<a href="#">epic()</a>	Returns <b>all epics</b> linked to specified issues.	ISSUE LIST
<a href="#">except()</a>	<b>Removes</b> certain elements from a list.	NUMBER LIST TEXT LIST ISSUE LIST

fieldValue()	Returns a number or text list with <b>field values</b> .	<input type="button" value="NUMBER LIST"/> <input type="button" value="TEXT LIST"/>
filterByCardinality()	Filters a given number, text, or issue list by the <b>number of occurrence of elements</b> .	<input type="button" value="NUMBER LIST"/> <input type="button" value="TEXT LIST"/> <input type="button" value="ISSUE LIST"/>
filterByIssueType()	<b>Filters</b> a given issue list by <b>issue type</b> .	<input type="button" value="ISSUE LIST"/>
filterByProject()	<b>Filters</b> a given issue list by <b>project</b> .	<input type="button" value="ISSUE LIST"/>
filterByResolution()	<b>Filters</b> a given issue list by <b>resolution</b> .	<input type="button" value="ISSUE LIST"/>
filterByStatus()	<b>Filters</b> a given issue list by <b>issue status</b> .	<input type="button" value="ISSUE LIST"/>
filterByValue()	<b>Filters</b> a number or text list using a <b>given comparison</b> .	<input type="button" value="NUMBER LIST"/> <input type="button" value="TEXT LIST"/>
findPattern()	Returns all <b>substrings</b> matching a given <b>regular expression</b> .	<input type="button" value="TEXT LIST"/>
findPatternIgnoreCase()	Returns all <b>substrings</b> matching a given <b>regular expression, ignoring the case</b> .	<input type="button" value="TEXT LIST"/>
findReplaceAll()	<b>Replaces all occurrences</b> of a given text with the given replacement.	<input type="button" value="TEXT"/>
findReplaceAllIgnoreCase()	<b>Replaces all occurrences</b> of a given text with a given replacement, <b>ignoring the case</b> .	<input type="button" value="TEXT"/>
findReplaceFirst()	<b>Replaces the first occurrence</b> of a given text with the given replacement.	<input type="button" value="TEXT"/>
findReplaceFirstIgnoreCase()	<b>Replaces the first occurrence</b> of a given text with the given replacement, <b>ignoring the case</b> .	<input type="button" value="TEXT"/>
first()	Returns the first element of a <b>number, text, or issue list</b> .	<input type="button" value="NUMBER"/> <input type="button" value="TEXT"/> <input type="button" value="ISSUE LIST"/>
floor()	Returns the <b>greatest mathematical integer</b> that is less than or equal to the input number.	<input type="button" value="NUMBER"/>
getFromJSON()	Returns the result of a given JMESPath which is applied to a JSON	<input type="button" value="TEXT"/>
getMatchingValue()	Returns a custom reference value for a given or <b>text or number</b> .	<input type="button" value="NUMBER"/> <input type="button" value="TEXT"/>
hour()	Returns the <b>hour</b> part of any given <b>timestamp</b> .	<input type="button" value="NUMBER"/>
intersect()	Returns <b>common elements</b> of two lists.	<input type="button" value="NUMBER LIST"/> <input type="button" value="TEXT LIST"/> <input type="button" value="ISSUE LIST"/>
issueKeysToIssueList()	Converts a <b>text</b> containing <b>issue keys</b> to an <b>issue list</b> .	<input type="button" value="ISSUE LIST"/>
issuesFromJQL()	Returns a list of issues returned by a specified <b>JQL query</b> .	<input type="button" value="ISSUE LIST"/>
issuesUnderEpic()	Returns all <b>issues</b> linked to a given <b>epic</b>	<input type="button" value="ISSUE LIST"/>
issueType()	Returns the <b>name</b> of the <b>issue type</b> with a given <b>ID</b> .	<input type="button" value="TEXT"/>
jiraExpression()	Returns the result of a <b>Jira expression</b> .	<input type="button" value="TEXT"/>

last()	Returns the last element of a <b>number, text, or issue list</b> .	<input type="button" value="NUMBER"/> <input type="button" value="TEXT"/> <input type="button" value="ISSUE LIST"/>
length()	Returns the <b>length</b> any given text.	<input type="button" value="NUMBER"/>
linkedIssues()	Returns a <b>list of issues linked</b> .	<input type="button" value="ISSUE LIST"/>
matches()	Checks, if the given <b>text matches</b> the given <b>regular expression</b> .	<input type="button" value="BOOLEAN"/>
max()	Returns the <b>highest value</b> in a number list.	<input type="button" value="NUMBER"/>
max(numbers)	Returns the <b>larger of two</b> numeric values.	<input type="button" value="NUMBER"/>
min()	Returns the <b>smallest value</b> in a number list.	<input type="button" value="NUMBER"/>
min(numbers)	Returns the <b>smaller of two</b> numeric values.	<input type="button" value="NUMBER"/>
minute()	Returns the <b>minutes</b> part of a given timestamp.	<input type="button" value="NUMBER"/>
modulus(numbers)	Returns the remainder after division of the dividend by the divisor.	<input type="button" value="NUMBER"/>
month()	Returns the <b>month</b> part of a given timestamp.	<input type="button" value="NUMBER"/>
nthElement()	Returns the <b>nth element</b> of a number, text or issue list.	<input type="button" value="NUMBER"/> <input type="button" value="TEXT"/> <input type="button" value="ISSUE LIST"/>
project()	Returns the <b>key</b> of the <b>project</b> with a given <b>ID</b> .	<input type="button" value="TEXT"/>
projectId()	Returns the <b>ID</b> of the <b>project</b> with a given <b>key</b> or <b>name</b> .	<input type="button" value="NUMBER"/>
random()	Returns a <b>number</b> between <b>0 and 1.0</b> .	<input type="button" value="NUMBER"/>
replaceAll()	Replaces all substrings matching a <b>regular expression</b> with a given <b>replacement</b> .	<input type="button" value="TEXT"/>
replaceFirst()	Replaces the <b>first substring</b> matching a given <b>regular expression</b> with a given replacement.	<input type="button" value="TEXT"/>
resolution()	Returns the <b>name</b> of the <b>resolution</b> with a given <b>ID</b> .	<input type="button" value="TEXT"/>
round(number)	Returns the <b>closest integer</b> to the input number.	<input type="button" value="NUMBER"/>
second()	Returns the <b>second</b> part of a given <b>timestamp</b> .	<input type="button" value="NUMBER"/>
siblingIssuesUnderEpic()	Returns all <b>issues</b> linked to a given <b>epic</b>	<input type="button" value="ISSUE LIST"/>
sort()	<b>Sorts</b> a given list in a specific order.	<input type="button" value="NUMBER LIST"/> <input type="button" value="TEXT LIST"/> <input type="button" value="ISSUE LIST"/>
status()	Returns a <b>status name</b> .	<input type="button" value="TEXT"/>
stringToDate()	Converts a <b>text</b> into a <b>date</b> .	<input type="button" value="NUMBER"/>
sublist()	Returns a <b>defined extract</b> of a given <b>list</b> .	<input type="button" value="NUMBER LIST"/> <input type="button" value="TEXT LIST"/> <input type="button" value="ISSUE LIST"/>

substring()	Returns a <b>specific part</b> of a text.	TEXT
subtasks()	Returns the list of <b>sub-tasks</b> of the specified <b>issue(s)</b> .	ISSUE LIST
sum()	<b>Sums up</b> all values in a given number list.	NUMBER
timePart()	Returns the <b>time part</b> of any given date.	NUMBER
toLogicalValue()	Converts a <b>text</b> and lists to a <b>logical value</b> .	BOOLEAN
toLowerCase()	Converts a given <b>text</b> with all its characters to <b>lower case</b> .	TEXT
toNumber()	Converts a <b>text</b> to a <b>number</b> .	NUMBER
toNumberList()	Converts <b>text</b> to a <b>number list</b> .	NUMBER LIST
toString()	Converts <b>numbers</b> and lists to plain <b>text</b> .	TEXT
toStringList()	Converts <b>text</b> to a <b>text list</b> .	TEXT LIST
toUpperCase()	Converts a given <b>text</b> with all characters to <b>upper case</b> .	TEXT
trim()	Removes <b>leading and trailing blanks</b> (white spaces and tabs) from a text.	TEXT
union()	Returns <b>distinct elements</b> of two lists.	NUMBER LIST TEXT LIST ISSUE LIST
userId()	Returns the <b>Atlassian account Id</b> of given user(s).	TEXT TEXT LIST
displayName()	Returns the <b>display name</b> of a given user.	TEXT TEXT LIST
year()	Returns the <b>year</b> part of a timestamp.	NUMBER
