issuesFromJQL()

This function returns an **issue list** of issues returned by the specified **JQL query**. Visibility restrictions (permissions and issue security) might apply. This query will be run as the configured **run as user**.

Syntax
`issuesFromJQL(jqlQuery) #Output: Issue list`

Examples

| Parser expression	Description
`%{issuesFromJQL("status in (Open, Done)")}`	This example returns an **issue list** with all issues that are in status "**Open**" or "**Done**", e.g: **IT-2232, IT-21233**
`%{issuesFromJQL("'Story point estimate' is not empty")}`	This example returns an **issue list** with all issues that do have a **story point estimation**, e.g: **IT-2321, IT-2124, IT-342**

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`jqlQuery`	TEXT	Any valid JQL query. ⚠️ Double quotation marks in JQL have to be replaced with single quotation marks, e.g.: **Usually JQL would look like** — "Epic Link" is not empty **Using it within issuesFromJQL()** — 'Epic Link' is not empty

Output

This function returns an ISSUE LIST

If the **JQL query** does not return a result, the function returns an empty ISSUE LIST
