Release date	04 Sep 2020
Release type	FEATURES
Highlights	A single place for customizing workflows and writing JWT & Jira expressions, and other new features

See it in action

Your browser does not support the HTML5 video element

Have all control in a single place when customizing workflows and writing [JWT](#) and [Jira expressions](#).

New features

- [New intuitive guided configuration](#) with the central field injector, more built-in examples and auto-completion
- Support of a large set of new parser functions like `count()` and `subtasks()` to access and manipulate issue data
- [Live testing of expressions](#) against any issue without having to publish the workflow
- A new in-app handbook and function reference to copy&paste or mark your favorites

Do you have ideas for more improvements? Many new features and ideas for improvements come directly from customer feedback.

So [get in touch](#) or tweet us at [@xAppsByDecadis](#) to share yours.
