

projectIDFromKey()

This function returns the **internal ID** of a given **project key**, or a comma-separated list of project keys.

Syntax

```
projectIDFromKey(projectKeys) #Output: Text
```

Examples

Parser expression	Description
Syntax projectIDFromKey("DEMO")	This example returns a text representing the internal ID of the project with the key "DEMO", e.g.: 10001
Syntax projectIDFromKey(%{issue.project.key})	This example returns the internal ID of the current issue's project, e.g.: 10005
Syntax projectIDFromKey(toString(distinct(fieldValue(%{issue.project.key}, linkedIssues()))))	This example returns a all internal IDs of projects from linked issues, e.g.: 10000, 10003 More info... Steps in this example: 1. Use linkedIssues() to get all issues linked to the current issue 2. Use fieldValue() to get the project key from the linked issues 3. Use distinct() to remove duplicate keys 4. Use toString() to convert the returned text list to a text with comma separated keys
