

textOnIssueList()

This function returns a **text list** in result of evaluating **textExpression** against each of the issues in argument **issues**.

The parameter **textExpression** is an expression that returns a **text**, where references to field values of issues in argument **issues** are done using the **function origin** before field code.

e.g., `%{function.issue.summary}` is field code for **Summary** in each of the issues in argument **issues**.

Syntax

`textOnIssueList(issueList, textExpression)` #Output: Text list

Examples

Parser expression	Description
<code>textOnIssueList(subtasks(), %{function.issue.assignee} = %{function.issue.reporter} ? %{function.issue.key} : null)</code>	This example returns the issue keys of sub-tasks with the same reporter and assignee. To achieve this, the following functions are used; <code>subtasks()</code>

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
issueList	ISSUE LIST	Any given issue list. Usually this value is retrieved from a function (e.g. <code>linkedIssues()</code> or <code>subtasks()</code>).
textExpression	TEXT	A valid text expression.

Output

This function returns a

TEXT LIST
