

Date and time of resolution

Field code
<code>%{issue.resolutionDate}</code>

 Read

Returned value	Date and time of the most recent update of the issue's resolution
Output data type	TEXT
Example output	19/Mar/20 1:38 PM

When cast to text, the output depends on the `jira.date.time.picker.java.format` parameter set in your Jira instance.

19/Mar/20 1:38 PM would be returned for `dd/MMM/yy h:mm a`

If you want to return a **number** (a timestamp) instead, **remove** the leading `%` character in front of the field code.

You will **not** be able to do this in the **basic mode**. Learn more about [Parsing modes](#).
