

# Clone issue link

This is a **legacy function** which has been deprecated with version **3.0**.

When added to "**Create Issue**" transition, this post function ensures that issue links will always be cloned, even if the user forgets to check "**Clone Links**" checkbox.

## Configuration

---

### Run as

Select which **user** will be used to execute this post function. By default this parameter is set to the **current user**. You can also use field codes to run the function as a dynamic user (e.g. current assignee).

Make sure that the user running the post function has all the **relevant permissions** to perform the actions defined in the configuration (e.g. "Update Issues")!

If you want to keep track the actions being performed automatically, we suggest to create a **dedicated JWT account**, granted all relevant **permissions**, and use it in the Run as parameter to identify which changes have been made with JWT.

## Use cases and examples
